Q1: On Sheet 3 of 4 of the drawings there are two (2) details for pavement patching. Please indicate where each one is to be used.

A2: For this project, Detail Plate R-4 will primarily be used, but R-5 is provided in case there is an instance where it needs to be used instead.

Each detail plate is to be used in different scenarios depending on the size of the excavation and its proximity to the edge or center of the roadway.

R-4 specifies a 5' minimum of paving that overlaps the narrower trench by 1' on each side and 3' minimum overlay on either side of the trench repair. (This is preferred.)

R-5 specifies 5' minimum paving that matches the width of the excavation below it and shows a varying width of pavement on either side that depends on the proximity to the road edge or centerline. (This is permissible.)

ALL EDGES SHALL BE SEALED WITH
A RUBBERIZED ASPHALT SEALER.

IF LESS THAN 3'-0"
