Company: _____

Date: _____

Signature: _____

The following questions were discussed during the pre-bid meeting held yesterday. The sign in sheet from that meeting is also included here.

Q1: Will the existing concrete slab be removed as part of this project?

A1: The concrete slab that serves as the foundation / floor of the structure will remain. Any pipe, conduit or other penetrations through the slab shall be cut and capped at the floor level.

Q2: Once the building is removed there will be a section of railing missing, will this need to be replaced as part of this project?

A2: No, the railing on the adjacent clarifier will not be replaced as part of this scope. City staff, will replace that at a later date.

Q3: Are there drawings or plans for the tank? What is the tank made of?

A3: The only plans we have from when the tank was constructed are the 1977 drawings included with the bid package already. The tank is made of single walled steel.

Q4: Can the access road to the lime building be blocked during demolition?

A4: Yes the road can be blocked during demolition. Contractor will be responsible for protecting the asphalt surface and any surrounding areas.

Q5: Is there a restriction on site to which type of cutting is used? (torch, grinding, etc.)

A6: No there is no restriction. The silo building is just outside of the flame restricted area.
